DT 13-SEP-2005 (TrEMBLerel. 31, Last annotation update)

DE Brain cDNA, clone: QtrA-11374, similar to human protein phosphatase,

DE EP hand calcium-binding domain 1(PPEFI), transcript variant 1,.

OS Macaca fascicularis (Crab eating macaque) (Cynomolgus monkey).

OC Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;

OC Mammalia; Craniate; Cercopithecinae; Macaca.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              phosphate.

COPACTOR: Binds 1 iron ion per subunit (By s
COPACTOR: Binds 1 manganese ion per subunit
COPACTOR: Magnesium (By similarity).

ENZYME REGULATION: Activated by calcium.
BIOPHYSICOCHEMICAL PROPERTIES:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Optimum pH is 8.0;
ALTERNATIVE PRODUCTS:
Event=Alternative eplicing; Named isoforms=5;
                                                                                 retinoblastoma cells. Also found in fetal brain. SIMILARITY: Belongs to the PPP phosphatase famil SIMILARITY: Contains 3 EF-hand domains. SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of photoreceptors.
